Work-based Learning (WBL) is a learning process based on the actual work in an industry. Malaysian Polytechnics (institutions of higher learning) are stakeholders of Work-Based Learning (WBL) in Malaysia. There are seven factors in the generic skills and moral values that need to be acquired by the polytechnic engineering students before they undergo the process of learning in Work-Based Learning (WBL) in the industry. Generic skills to be applied to the students include communication skills, work skills, leadership skills. Moral values cover the relationship between students and lecturers/mentors, students and fellow students, students and nature. This concept paper shows the need of generic skills and moral values in education training for engineering students of Malaysian Polytechnics.
