Between dialysis and a kidney transplant
— Torn between waiting in line and getting an organ donor

EXCLUSIVE
Keeping fit while pregnant or with child

SUNWAY MEDICAL CENTRE
THE NEXT FRONTIER FOR MINIMALLY-INVASIVE SURGERY

Potential benefits:
• Fewer complications
• Faster healing time
• Minimal scarring
• Less blood loss
• Shorter hospital stay
Obesity associated with chronic periodontitis disease

CHRONIC PERIODONTITIS is a progressive inflammatory disease of the tissues that supports the teeth, which can lead to tooth loss. Inflammation and infection of the gums are observed in nearly all cases of periodontal disease.

A person with periodontal disease is at increased risk of developing other health conditions such as heart disease, stroke, and diabetes.

Periodontal disease can also cause the gums to become inflamed, red, and swollen. This can lead to bleeding and bad breath.

Periodontal disease is a major cause of tooth loss in adults. In fact, it is estimated that 10% of the adult population in the United States has no teeth.
