The aim of this step by step manual is to provide a foundation of anatomy of the paranasal sinuses, orbit, ethmoidal vessels and skull base.

The editing is very minimal as only the portion where the endoscope is removed to be cleaned and deleted. Thus, this dissection can be considered live with narration of the surgical steps as it was performed in an international workshop.

This dissection can be viewed in total or in certain surgical steps as required. It contains multiple videos of step by step and a single video of the entire dissection.
