Abstract

Using the verses of the Quran as a therapy in the treatment and ruqyah nowadays are no longer strangers. The growth of alternative treatment centers that provide service Islamic treatment was rapidly growth. The service of treatments that offered was included treatment of the spiritual diseases and physical ailments. Beside, the approach of treatment provided, each practitioner will use the verses of the Qur'an or from certain prayers as ruqyah (incantation) to help in curing the diseases. The question is what are the significant factors and a verse of the Qur'an are used as ruqyah closely associated with the disease? How the practitioners determine sentences coincides with the disease treated? Through the application of inductive and deductive analysis methodology, this article aims to analyze the verses of the Quran which is used for the treatment of a disease, and examines significant verses as "al-shifa'" to human disease. The study found that there are four (4) significant factors to be used as the designation of a sentence that ruqyah [1] Have a word or key word clearly associated with the disease; [2] Understanding the story behind the decline in verse; [3] Understanding implicit meaning behind the verses of the Quran; and [4] The
