RE: BioRes 10060 [Equilibrium Isotherm, Kinetic, and Thermodynamic Studies of Divalent Cation Adsorption onto Calamus gracilis Sawdust-Based Activated Carbon]

Ganiyu Abimbola Adebisi, Zaira Zaman Chowdhury, Sharifah Bee Abd Hamid, and Eaqub Ali,

Noting your careful revision, in response to reviewer input, your article now has been accepted for publication in BioResources.

Please carefully check the attached PROOF of your document. Green highlighting indicates items that were changed during the process of proofreading. If you agree with the changes, then only your approval is needed. Otherwise, please make additional changes and mark those changes with another color of highlighting or with colored text. Send your response to hubbe@ncsu.edu. Please be sure to put the label “BioRes”, followed by your article’s five-digit ID number, somewhere in the subject line of the e-mail message.

When we get your response and corrections, the article can be published.

Please note that authors who submitted their articles after June 18, 2010 intended for publication in BioResources have been requested to make a payment to cover page expenses. These funds will cover our costs for proofreading, file management, and publication infrastructure. Any excess funds will be used for undergraduate scholarship grants (to pay for tuition in the Department of Forest Biomaterials at North Carolina State University). This arrangement provides sustainable funding so that we can continue to provide high-quality, peer-reviewed articles without charge to readers on the web – ensuring that articles receive the highest exposure and potential impact associated with open access publishing. A payment form is attached to this message.

In light of the topic of your article, I am also attaching a review article that may interest you for your future studies.

Regards,

Martin A. Hubbe
